Module No. 1, 2 and 3

Project

Due: - April

Total marks: Module 1, 2, 3 and 4 - 100 marks each

- *Date: April 8, 2025*

Lecturer:: Andre Gayle

Instructions:-This is a group assignment.

You are required to create a web application using HTML5, PHP and MySQL to solve a problem that is being experienced by an organization or group of your choice.

The following are requirements that your application MUST meet:

Client Side

User Interface

- Aesthetically appealing User Interface
- Embed PHP in HTML
- Incorporate AJAX

Server Side

Validation

- User inputs should be validated to prevent unclean values being written to the database
- Users should get adequate feedback when incorrect values are entered

Database

- Use MySQL Workbench or PHP MyAdmin to graphically model database
- Generate Database from graphical model

Security

- Only registered users can use the system.
- There should be different access levels for users
- Use secure sessions to add additional layer of security
- Encrypt passwords before storing into database
- All actions performed should be logged, where only administrators can view the logs

General Requirements

- Use of Control Structures (Selection and Iteration)
- Use of user defined Functions
- Use of built in Functions
- Use of include() and require() functions
- Use PHP Mail functions
- Use Custom PHP Classes
- Connect to MySQL Database
- Manipulate data in database
- Use PHP Sessions and Cookies
- Incorporate Object Oriented PHP paradigm
- Implement the PHP QR Code is open source (LGPL) library
- Upload images
- Generate and display Thumbnails
- Generate PDF Reports
- Use of Files
- Read information from **.xls** or **.csv** files

NB: Your application must be hosted on a live server

You are required to compress your entire project and submit along with a document containing the following information:

- Database Model
- Screenshots
- Forms and UI Layouts
- Project Task Checklist for each member of the group

Project Task Checklist

Name: _____

Group Members:

Deliverable	Completed By:
Client Side	
User Interface	
Aesthetically appealing User Interface	
Embed PHP in HTML	
Incorporate AJAX	
Server Side	
Validation	
User inputs should be validated to prevent unclean values being written to the database	
Users should get adequate feedback when incorrect values are entered	
Database	
Use MySQL Workbench to graphically model database	
Generate Database from graphical model	
Security	
Only registered users can use the system.	
There should be different access levels for users	
Use secure sessions to add additional layer of security	
Encrypt passwords before storing into database	
All actions performed should be logged, where only administrators can view the logs	
General Requirements	
Use of Control Structures (Selection and Iteration)	
Use of user defined Functions	
Use of built in Functions	
Use of include() and require() functions	
Use PHP Mail functions	
Use Custom PHP Classes	
Connect to MySQL Database	
Manipulate data in database	
Use PHP Sessions and Cookies	
Incorporate Object Oriented PHP paradigm	
Implement the PHP QR Code is open source (LGPL) library	
Upload images	
Generate and display Thumbnails	
Generate PDF Reports	
Use of Files	
Read information from .xls or .csv files

MARKING SCHEME:

	Marks Assigned	Marks Obtained
Module 1		
Aesthetically appealing User Interface	10	
Embed PHP in HTML	12	
Incorporate AJAX	10	
User inputs should be validated to prevent unclean values being written to the database	40	
Users should get adequate feedback when incorrect values are entered	10	
Use of Control Structures (Selection and Iteration)	18	
Module TOTAL	100	
Module 2		
Encrypt passwords before storing into database	2	
Use of user defined Functions	5	
Use of built in Functions	5	
Use of include() and require() functions	5	
Use PHP Mail functions	7	
Implement the PHP QR Code is open source (LGPL) library	22	
Generate PDF Reports	22	
Use of Files	10	
Read information from .xls or .csv files	22	
Module TOTAL	100	
Module 3		
Use MySQL Workbench to graphically model database	5	
Generate Database from graphical model	5	
Only registered users can use the system	12	
There should be different access levels for users	13	
Use secure sessions to add additional layer of security	5	
Activity logs	10	
Use Custom PHP Classes	10	
Connect to MySQL Database	5	
Manipulate data in database	5	
Use PHP Sessions and Cookies	5	
Incorporate Object Oriented PHP paradigm	5	
Upload images	10	
Generate and display Thumbnails	10	
Module TOTAL	100
